ABOUT US

The world is changing rapidly. The legacy financial systems have pivoted from being service and customer oriented in years past to being predatory control systems dominated by regulators which seek endless transparency and disclosure. This threatens the hard earned wealth of families and entrepreneurs. Privacy is NOT criminal. It's an inherent God-given right that we all need to cherish and protect. Let's face it, without privacy there is no security. So as certain national governments buckle under the load of debt, they become ever more 'creative' in confiscating wealth. This creates the need for high net worth individuals to 'Globalize' their assets and seek more

friendly environs and systems to maintain the privacy, security and efficient management of their own legacy. This is the sole reason that MMG Capital Management & Trust (MMG) exists.

MMG has developed its own proprietary financial infrastructure. This system is an internationally compliant financial management system based on using a powerful and time tested, non-statutory, private business trust vehicle which offers unusual privacy and security.

Beyond the MMG business trust management systems, MMG principals have travelled the globe seeking reliable, like minded partners to provide leading edge, state-of-the-art services which not only support our mission but also go far beyond what the traditional institutions and financial systems can provide. This enables MMG clients to access a suite of services to support the efficient, productive and profitable management of their assets in trust.

MMG is a boutique consulting firm which puts an emphasis on direct, personal attention and 1 on 1 consulting, guidance and management to ensure that we are in sync with the clients' needs and objectives.

SERVICES OVERVIEW

HOLDINGS & PORTFOLIO MANAGEMENT - NEXT GENERATION ASSET CUSTODY & PROTECTION

As the primary business trust is funded it may create a network of other entities to hold certain hard assets or properties as any holding company would. Each entity is created to serve its own purpose.

Liquid assets can be applied to create a diversified investment portfolio which may include; gold or silver, crypto currencies, commodities, fiat currencies or other assets.

An online account management system is used to track holdings, exchange private messages, make requests for transfers, etc. This system functions identical to a robust online banking software system which is what it was designed for.

BANKING

The MMG business trust has access to a variety of banking options and related services which break down as follows;

- Domestic Banking - some clients have a need to manage an 'operational trust' which has a local bank account which they can manage for local business activity and expenses. This requires a specific entity be created for these purposes and it offers some unique benefits and advantages.

- International Banking - almost all global commerce is international now. And for entrepreneurs who do not deal internationally, security of funds may require having an international presence. This is built in to our systems.
- Crypto Banking - As crypto currencies become a larger part of the financial landscape for many people, there is an increasing need for crypto friendly banking. MMG clients have access. See below.
- Gold Banking - Imagine having a bank which allows you to buy a stockpile of gold or silver in a Swiss vault which you could sell on a moments notice and sale proceeds of fiat directly deposited to either your personal bank account, or deposited to your debit card with no spending limit.

- Anonymous banking - In the age of surveillance, tracking and full disclosure for control purposes, imagine having a private bank account which requires no KYC from you. MMG client trust managers have such facilities.
- Domestic wire coordinates for your international account - Banks are tending to look more closely at international wire transfers which leads to questions, which leads to reports and then who knows what? Imagine being able to offer a trading partner domestic wire coordinates and having the credit for the transfer appear in your international (offshore) account. MMG clients have access to this facility.

TRADING

Managed Trading Accounts: MMG clients have access to highly professional and successful traders who are available to manage a trading account tailored to the needs and objectives of the client trust. Our traders have an experienced and highly trained team of technical analysts who track the market on a daily basis and can identify market trends as they develop. Their track record is exceptional and results are far above 'the norm'. You may ask for more details on this.

Self Directed Trading Accounts: As a manager of the trust, you may prefer to do your own trading AND still have access to the technical analysis team to assist you in your decisions.

In either case the account is in the name of the trust and no KYC is required from you which gives you a level of privacy and security if not absolute anonymity.

The trading platform we use is highly advanced, internationally positioned and does not accept clients from the USA. What this means is that there is little to no possibility of any form of inquiry coming from that direction.

Items on the platform which can be traded are;

- All the forex pairs
- The main cryptocurrencies
- Commodities
- Oil and Gas
- Precious metals
- CFDs on stocks
- Indices

Let us help build a portfolio for you which is sure to beat the market averages by a long shot! And when you do it in the MMG system, it grows tax free!

CRYPTO BANKING

Our crypto friendly bank is a bridge connecting fiat and crypto. You may send in a bank wire transfer of US dollar, Euro or GBP and convert it instantly to Bitcoin, Ethereum, Tether or other cryptos. Or you may hold those cryptos in the bank wallet, convert it and send out a bank wire in fiat from the account. Our partner is a crypto friendly bank which is an all in one solution for fiat and digital assets.

This Bank offers a well structured, compliant and regulated financial architecture to provide us with services giving strong advantages in the digital transformation of the global economy. This is a borderless ecosystem giving instant access to all your digital and fiat assets in one place.

The trust may set up an independent account with unique log in credentials exclusive only to the trustee and manager and again, no further KYC would be required of you.

GOLD BANKING

More than just a gold or silver dealer, our Swiss Gold Bank allows clients' vaulted gold and silver holdings to be accessible on traditional banking systems by allowing clients to convert their gold to cash in real time 24/7/365.

Here, you can accumulate gold or silver in your personal account and move it over internally into the trust account for added protection from predators. When needed, it can be transferred back to your private account and liquidated for cash as needed. Fiat currency can be sent directly to your private bank account, the trust bank account or have it put on a debit card where you can spend it without limits. Want to buy a Ferrari with a debit card? You can do it!

Do you have a trading partner who prefers to be paid in gold rather than fiat? Pay them in gold with instant bar and coin transfers to his account internally in the system. Privacy doesn't get any better than this!

This provider maintains the highest grade data security and encryption stored on private servers in Switzerland's safest data center.

This is only a glimpse into our world of private asset management. We can offer a series of insightful and educational videos which dive deeper into this fascinating arena if you are hungry for more.
